Proposed Solution

Team ID: LTVIP2026TMIDS24962
Project: Empowering India: Union Budget Analysis

February 16, 2026

Proposed Solution Details

S.No	Parameter	Description
1	**Problem Statement**	Stakeholders (Startups, Researchers) struggle to decipher complex government budget PDFs to find sector-specific funding trends.
2	**Idea / Solution Description**	A data-driven Web Dashboard that visualizes Union Budget allocations. It integrates historical data (2021-22) and future estimates (2023-24) using interactive charts.
3	**Novelty / Uniqueness**	Unlike static news reports, this solution allows users to *interact* with the data—filtering by Ministry and drilling down to specific Schemes (e.g., PM Kisan) to see year-on-year growth.
4	**Social Impact**	Empowers NGOs and Social Enterprises to identify available government grants for rural development and healthcare, ensuring better utilization of public funds.
5	**Business Model**	*Freemium Model:* Basic access to public dashboards is free. Premium APIs for automated data extraction can be sold to financial analytics firms.
6	**Scalability**	The solution uses a Cloud-based visualization engine (Tableau Public), allowing it to handle thousands of concurrent users without local server strain.
